Limitation of liability

The content of this operating manual has been created taking the applicable laws and standards into account. The unit has been developed using state-of-the-art technology.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The manufacturer assumes no liability for damage resulting from:</strong></td>
</tr>
<tr>
<td>▶ Disregard/non-observance of the operating manual</td>

<tr>
<td>▶ Intentional misuse</td>
</tr>
<tr>
<td>▶ Use other than as intended</td>
</tr>
<tr>
<td>▶ Operation by untrained personnel</td>
</tr>
<tr>
<td>▶ Operation by non-professionals (to carry out maintenance work, etc.)</td>
</tr>
<tr>
<td>▶ Technical modifications to the unit that have not been agreed with the manufacturer</td>
</tr>
<tr>
<td>▶ Use of replacement parts that have not been approved by the manufacturer</td>
</tr>
</tbody>
</table>

Responsibilities of the operator

The unit is used for commercial purposes. The operator of the unit is therefore subject to the statutory obligations relating to occupational safety. In addition to the safety instructions in this operating manual, the regulations on safety, accident prevention and environmental protection that apply to the unit's area of application must be complied with.

In particular, the following apply:

- The operator must be familiar with the applicable regulations on occupational safety.
- The operator must ensure that all employees who use the unit have read and understood this operating manual.
- The operator must also train personnel at regular intervals and inform them of the dangers that can arise when using the unit.
- The operator must provide personnel with the necessary protective equipment.
- The operator must have all safety devices checked regularly for operability and completeness.
Documentation

Content and structure
This operating manual is an essential part of this unit. It contains instructions and information on how to use the unit safely and must be available to all users throughout the unit's service life. This operating manual is intended for use by trained operating personnel.

Labelling scheme for integrated text boxes and references
The following safety notices are used in this manual:

**DANGER**
Indicates an imminent danger that may cause serious physical injury or death.

**WARNING**
Indicates a potentially dangerous situation that may cause serious physical injury or death.

**CAUTION**
Indicates a potentially dangerous situation that may cause minor physical injury.

**NOTICE**
Indicates a potentially harmful situation in which the product or an object in its vicinity may be damaged.

**NOTICE**
Information or tips for easier operation.

Safety

The *sintering oven* is a high-temperature oven for commercial use in dental laboratories and may only be used for sintering sinterable ceramics.

Requirements for personnel

Trained and qualified personnel who know how to use the unit and whose specialist training, skills, experience and knowledge of the relevant regulations enables them to carry out the tasks assigned to them independently and recognise and avoid potential hazards.

**Danger**

**Electricity!**

Risk of death from electric shock.

- Do not touch live cables and components with wet hands.
- Observe the accident-prevention regulations when working with electric current.
- Before carrying out any installation, maintenance, cleaning or repair work, disconnect the power supply of the *sintering oven* and secure it against being switched back on.

**Risk of ignition!**

Use of inflammable and explosive materials near the oven.

- Do not operate the *sintering oven* near highly inflammable sources.
- Do not install the *sintering oven* on highly inflammable supporting surfaces.
**Safety**

**WARNING**

**Risk of burns from hot surfaces!**

The surfaces of the *sintering oven* become hot during operation. These may cause burns if touched.

- Do not touch the housing or the oven door during operation.
- Do not reach into the heating chamber. It may still retain a high level of residual heat from the previous heating process.
- Ensure that the *sintering oven* has cooled down before carrying out maintenance, cleaning and repair work.
- Wear heat-resistant safety gloves if it is necessary to carry out work on hot components.
- Use a suitable and sufficiently long pair of tongs to place the sintering dish in the oven and remove it from the oven.

**CAUTION**

**Incorrect operation!**

No liability is assumed for damage that may be caused by misuse, incorrect operation, incorrect connections or improper maintenance/repair work carried out by untrained personnel. All warranty services are also excluded in such cases.

The unit must not be used if it or the mains cable becomes damaged and no longer functions correctly.

In this case contact the manufacturer immediately.

For your own safety and to increase the service life of your unit, use only original replacement parts.

To ensure safe operation of *the sintering oven*, regional regulations (e.g. accident-prevention regulations) apply in addition to the instructions in this operating manual. The former must be made available by the operator of the unit. The safety notices on the *sintering oven* must be kept in a legible condition.

**NOTICE**

This operating manual must be read and understood by each user before working on and with the unit.

The operating manual must be kept for the specified service life of the *sintering oven*. 
Transport, packaging and storage

Transport

**WARNING**

*Injury due to the sintering oven falling down!*

Slipping/falling when lifting and carrying the sintering oven can lead to serious injuries.
- Only carry/hold the sintering oven at the lower edge of the housing (base).
- Always have at least 2 persons carry the sintering oven (max. 30 kg/person).

**CAUTION**

*Risk of injury due to oven weight!*

Physical strain/back injuries due to the high inherent weight.
- Have at least two people carry/move the sintering oven together.

**NOTICE**

*Transport damage!*

To prevent injury to personnel and material damage:
- Transport the unit in an upright position only.
- Do not stack units on top of each other.
- Do not place any other objects on the unit.
- Transport must be as free of shaking and vibrations as possible to prevent the unit from being damaged.
- Make sure that the unit is secured against slipping and falling during transport.
- The goods must be inspected for damage and loss immediately upon receipt. Defects must be documented by the freight carrier on the letter of consignment in order to lodge claims. Mihm-Vogt GmbH & Co.KG assumes no liability for any damage and loss that is only found subsequently.
Packaging

**NOTICE**
The packaging protects the *sintering oven* against transport damage, corrosion and other forms of damage. Only remove it shortly before initial commissioning and store it in dry conditions for later reuse.

Storage

**NOTICE**
**Temperature damage!**
To prevent temperature damage:
- Store the unit only at temperatures between +5 and +40 °C.
- Always store the unit in dry and dust-free conditions.
- Avoid exposure to direct sunlight.
- Avoid mechanical vibrations.
Technical description

Function

The sintering oven is used to fire sinterable ceramics.

The product to be sintered is placed in the sintering dish and set on the support discs. The electrically powered oven door closes and the heat-up process starts after entering the heating parameters and pressing the Start/Stop button.

Once the heating program has ended and the sintering oven has cooled down, the oven door opens and the finished product can be removed.

Heating chamber

The product is sintered in the heating chamber. This consists of two different ceramic insulation layers and is operated using MoSi$_2$ heating elements. The outer insulating layer is designed for temperatures up to 1200 °C; the inner layer for temperatures up to 1700 °C.

Oven door

The oven door consists of a three-part ceramic door panel. A safety switch disconnects the heating current as soon as the oven door is opened.

A slip clutch used in the drive mechanism prevents too high a contact pressure between the oven door and heating chamber.

Oven housing

The oven housing consists of steel plate coated with plastic on both the inside and the outside.

Program controller

The program controller has a finishing-time setting that can be used to specify a day and time for the program to finish. The switch-on time is calculated automatically so that the heating process is stopped at the required time and the sintered item can be removed.

Operating parameters and heating programs are stored in a non-volatile memory and are retained even if the power supply fails.

The set target temperature is maintained within an accuracy of ± 1 °C.

A temperature sensor integrated into the heating chamber measures the temperature of the chamber close to the product.

A thermocouple fail-safe prevents the sintering oven from overheating if the temperature sensor becomes defective.
Conformity

EC Declaration of Conformity according to Machinery Directive 2006/42/EC Annex II 1.A

The manufacturer / distributor
MIHM-VOGT GmbH & Co. KG
Friedrich-List-Str. 8
76297 Stutensee
Tel.: +49 (0) 72 44/7 08 71-0
Fax: +49 (0) 72 44/7 08 71-20
Email: info@mihm-vogt.de

hereby declares that the following product

Product designation: Sintering oven
Make: HTS-2/M/Zirkon-120

Description:
The sintering oven is a high-temperature oven for commercial use in dental laboratories and may only be used for sintering sinterable ceramics.
corresponds to all relevant regulations of the above directive as well as the further applied directives (below) – including their amendments applicable at the time of the declaration.

The following EU directives were applied: EMC 2014/30/EU RoHS 2011/65/EU
The protection objectives of the Low Voltage Directive 2014/35/EU were complied with.

The following harmonised standards were applied:

EN 61010-1:2010 Safety requirements for electrical equipment for measurement, control and laboratory use – Part 1: General requirements (IEC 61010-1:2010)
EN 61326-1:2013 Electrical equipment for measurement, control and laboratory use – EMC requirements – Part 1: General requirements (IEC 61326-1:2012)

The following national or international standards (or parts/clauses thereof) and specifications were applied:

Name and address of the person who is authorised to compile the technical documents: Gillen, Tobias

Place: Stutensee / Date: 15.9.2016

(Signature) Dietmar Gräbe
**Intended use**

The *sintering oven* is a high-temperature oven for commercial use in dental laboratories and may only be used for sintering sinterable ceramics.

---

**Notice**

No liability is assumed for damage that may be caused by misuse, incorrect operation, incorrect connections or improper maintenance/repair work carried out by untrained personnel. All warranty services are also excluded in such cases.

---

**Potential misuse**

- Operation by untrained and insufficiently qualified personnel.
- Use of products that have not been approved by the manufacturer.
- Use of replacement parts that have not been approved by the manufacturer.
- Any use not in accordance with the declaration of conformity.
- Technical modifications to and conversions of the unit that have not been approved by the manufacturer.

---

**Notice**

Only sintering aids/accessories/wearing parts as well as spare parts approved by Mihm-Vogt may be used.

You can find an overview of the approved media and equipment on the supplementary sheet in your device packaging.

Installation

Installation location

The *sintering oven* is designed as a table-top unit. A level surface of at least 50 cm x 60 cm that supports a load of up to 80 kg is recommended to ensure stability.

Installation conditions

► Always install the *sintering oven* in dry rooms that are as dust-free as possible and make sure that liquids cannot penetrate the unit.
► Highly inflammable and combustible gases and liquids must not be stored in the installation rooms.
► Do not place any combustible and inflammable objects near the *sintering oven*.
► Keep a distance of 50 mm around the sintering oven for sufficient cooling.

</tbody>
</table>

1. Align the supporting surface horizontally.
2. Place the *sintering oven* on the supporting surface.
   △ *Make sure the surface is non-slip.*
   △ *Lift and carry the sintering oven only at the unit base.*
Electrical connection

Local installation

☑ The sintering oven requires its own electrical circuit.

☑ The building's electrical circuit must have a type-K or type-Z circuit breaker with a rated current of at least 16 A (other types of circuit breaker depending on the country of use).

☑ An additional residual-current circuit breaker (designed for 30 mA tripping current) must be installed.

☑ To ensure electrically safe operation, the sintering oven requires a protective earth conductor to be connected to the power socket.

☑ When selecting the installation location, ensure that the accompanying mains cable is 2.0 m long. Extending the cable is not permitted. The supply voltage must be within the rated voltage range of 200-240 V.

---

Danger

Electricity!
Risk of death from electric shock.

☑ Do not touch live cables and components with wet hands.

☑ Observe the accident-prevention regulations when working with electric current.

☑ Only connect the unit to a voltage supply that matches the specifications on the rating plate.

---

Warning

Release of pollutants!

☑ Suitable respiratory protection must be worn when handling insulating material.

☑ If necessary, an extraction system must be installed.

Operation

Operating elements and displays

The microprocessor-controlled program controller enables a wide range of heating curves to be run through with high precision. The unit is operated via a membrane keyboard and menus displayed on an LCD screen.

The program controller has the following operating elements:

1. Display
2. Heating levels
3. Numeric keypad
4. Start/Stop button
5. Finishing time button
6. Mains switch
7. Save button
8. Load button
9. Function button
10. Heating phase LEDs
11. Additional function: Open oven door

33 Service E - Heating element regeneration
Initial commissioning

Notice
Check the basic settings of the sintering oven (see “Basic settings” on page 31).

Using the door insulation

1. Insert the connecting pins (Pos. 2) into the base support (Pos. 1).

2. Place the support (Pos. 3) on the connecting pins (Pos. 2).

3. Place the centring pin (Pos. 4) in the centre of the support (Pos. 3).

4. Place the support disc (Pos. 5) on the support (Pos. 3) with the centre hole downwards onto the centring pin (Pos. 4).

5. Insert the complete door panel in the oven door.
Sintering aids

**NOTICE**

Only use sintering aids approved by Mihm-Vogt. You can find application notes in the information flyer for the relevant sintering aid.

Sintering process

Sintering Oven

Feeding

⚠️ The ceramic door panel is extremely porous and sensitive to scratching and impacts.

⚠️ Do not grip the door panel with extraction pliers.

1. Switch the sintering oven on.

ивать The oven door opens automatically.

2. Fill the sintering dish (included in the delivery) with sintering granulate.

3. Place the item to be sintered in the sintering dish.

4. Place the equipped sintering dish on the support disc using suitable crucible tongs.

5. Start a firing program by pressing the **START/STOP** button.

尼亚 The oven door closes automatically.

**CAUTION**

Risk of crushing limbs!

The oven door closes automatically.

➤ Only press the **START/STOP** button after the filled sintering dish has been positioned.

➤ Make sure that nobody reaches between the oven door and heating chamber while the oven door is closing.
**Notice**

Recommendation for use of the sintering dishes provided:
- Use of sintering dish SPEED 120/30 mm at heating rates greater than 25°C/min.
- Use of sintering dish 120/30 mm at heating rates of 25°C/min and lower.

**Selecting and loading a heating program**

1. Press the **LOAD** button.

   - The **LOAD PROGRAM** menu opens.
   - The sintering oven loads the heating program last used

2. Press the **S4** button until the required heating program is reached or enter the desired heating program via the numeric pad.

3. Press the **S2** button for “YES” to confirm the loading.

   - The loaded heating program is displayed.

4. Press the **S1** button for “No” to cancel the loading.

   - The heating program last loaded is displayed.

**Starting/stopping a heating program**

**Requirements**
- **Sintering oven** is filled
- Heating program is loaded

1. Press the **START/STOP** button.

   - The heating program starts.
   - The oven door closes automatically.
The status display changes from **READY** to **SEQUENCE**.

The process status is also shown in a level diagram:

2. Press the **START/STOP** button again.

   - The heating program is stopped.

   - The status display changes from **SEQUENCE** to **READY**.

3. Press the **START/STOP** button again to continue the heating program.

### Removing the sintering dish from the heating oven

**Requirements**

- The oven door is open

1. Guide suitable crucible tongs under the sintering dish and lift it off the support disc.

2. Place the sintering dish on a suitable heat-resistant surface.
Programming the heating levels

The control provides the option of setting the sintering oven heat-up in 1-4 heating levels as a heating program. Heating and cooling is possible within a heating program.

If no setting is made within one minute during the programming, the cursor will disappear and an acoustic signal sounds.

1. Press the S1 button.
   - The cursor for entry flashes in the °C/min field.

2. Enter the heating rate using the numerals 0-9. The minimum heating speed is 1°C/min (2°F/min), the maximum heating speed is 99°C/min (178°F/min).
   - If the entry is below a two-digit value, the cursor must be moved over the relevant level button to the next input field.
   - After entering the heating rate, the cursor skips to the next input field.

3. Use the numerals 0-9 to enter the four-digit holding temperature that the oven is to heat up to in the heating level S1.
   - After entering the temperature value, the cursor skips to the next input field.
   - If the entry is below a four-digit value, the cursor must be moved over the relevant level button to the next input field.

Notice

The maximum programmable temperature of the sintering oven is 1650°C. If a higher temperature is entered, the display skips back to the previous value.

- After entering the temperature value, the cursor skips to the next input field.
- If the entry is below a four-digit value, the cursor must be moved over the relevant level button to the next input field.
4. Enter the holding time in minutes using the numerals 0-9.

**Notice**
The maximum programmable holding time is 999 minutes.

☞ After all three values have been entered, the programming for heating level 1 is completed.

**Programming levels S2 to S4**
To program further heating levels, follow the steps from the first heating level with the corresponding heating level button (e.g. S2 for the second heating level, S3 for the third heating level, etc.).

If you do not require all 4 heating levels, the temperature must be set to zero in the level not used.

Level S1 to S3 can be at zero.
Level S4 controls the door opening temperature and must be entered.

**Saving the heating program**
The *sintering oven* can save up to 30 different heating programs.

Saved heating programs are also retained after switching off the *sintering oven*.

A heating program is always saved under the program number under which it was previously loaded.

1. Press the **Save** button.

☞ The **SAVE** menu is displayed.

2. Press the S2 button for “YES” to save the heating program.

3. Press the S1 button for “No” to cancel the saving.
Linear cooling

**Notice**

The sintering oven enables linear cooling by automatically opening the oven door incrementally below 1200°C. For this, the cooling phase must be programmed in level 4 (and level 3 for multistage cooling phase).

The oven door is only opened fully after the end of the program.

**Saving the heating program with a name**

To uniquely identify a specific heating program, it can be saved with a name you can freely choose.

1. Press the *Save* button.
   - The *Save* menu is displayed.

2. Press the *Function* button to change the first letter. Pressing this button repeatedly toggles through the alphabet from A to Z.

3. Press the *S4* button to skip to the next letter.

4. After you have entered the desired name, press the *S2* button to save the changes.
Renaming the heating program

Requirements
☑ The program values are entered for all levels.

1. Press the **Save** button.

- The **SAVE** menu is displayed.

A memory name with up to four lines can now be saved in the left field.

- You can use the **S4** button to move the cursor incrementally to the right.
Starting a heating program automatically

The **Sintering Oven** can be programmed via an integrated timer so that it finishes the heating program currently loaded at a specific finishing time. The integrated timer is used to specify the day and time at which a program should finish.

1. Select a heating program.

2. Press the **Finishing time** button.

   => The **AUTOSTART** program opens.

3. Press the S1 button to enter the day of the week.
   Set the days of the week using buttons 1-7 (1 = Mon, 2 = Tue, 3 = Wed, etc.).

4. Press the S1 button again to skip to the time entry.

5. Set the hours using buttons 0-9.

6. Press the S1 button to change to the minutes display.

7. Set the minutes using buttons 0-9.

   => The timer is activated.

   => The finishing time as well as the calculated switch-on time are shown in the display.
Special functions

Sintering with ventilation

This additional function is used for extra ventilation of the combustion chamber during the sintering process, this having a positive effect on the oxidation process.

This function is only possible with program slots 15-20.

Preliminary drying without sintering

During the preliminary drying, the oven door remains open one large gap in the first program level S1. Preset program slots are provided by default for the preliminary drying. As a result, you can only perform this function on these slots. The special function is only active on slots 21-25.

Values may only be entered in level S1 for the preliminary drying without sintering. No values are assigned to levels S2-S4 for holding temperature and holding time. If value are nevertheless to be set for levels S2-S4, these must be reset to “0”.

Only the holding time can be changed in level S1!

Preliminary drying with sintering

The same function is usually saved for the preliminary drying with sintering, as for the preliminary drying without sintering. This means the oven door remains open one large gap in the first program level S1 during the preliminary drying. Consequently this special function is also saved on program slots 21-25. To add sintering to this function, the desired values are also set in levels S2-S4.
Basic settings

Parameter settings

The time and heating parameters of the **sintering oven** are preset and pre-programmed at the factory.

The **sintering oven** does not switch to summer/winter time automatically.

1. Switch the **sintering oven** on at the mains switch.

2. Press the **Function** button.

Â The Parameters menu opens.

Parameter menu

- **Language**
- **Signal tone On/Off**
- **Date**
- **Max. Lift temperature**
- **Time: 24/12h-Mode**
- **Temperature unit: °C/F**
3. Press a button (S1-S4) to select a parameter.

4. Press the corresponding parameter button several times until the desired change is reached.

**Setting the day and the time**

1. Press the **FUNCTION** button.

2. Press the **S2** button.

3. Set the days of the week using buttons 1-7 (1 = Mon, 2 = Tue, 3 = Wed, etc.).

4. Press the **S2** button to change to the hours display.

5. Set the hours using buttons 0-9.

6. Press the **S2** button to change to the minutes display.
7. Set the minutes using buttons 0-9.

**Notice**
A change made is only accepted if the cursor is no longer visible.

### Setting the lift temperature

1. Press the **FUNCTION** button.

2. Press the **S1** button.
   - The second Parameters menu opens.

3. Press the **S4** button.

4. Set the lift temperature using buttons 0-9.
   - Adjustable range 100°C to 300°C
Switching off Sintering Oven

1. Switch the *sintering oven* off at the mains switch.

**CAUTION**

Risk of burns from the residual heat of the high-temperature oven!

The heating chamber can retain a significant amount of residual heat even when the *sintering oven* is switched off. There is a risk of burns from the heating chamber walls and the oven door.

Therefore:

- Make sure the *sintering oven* has cooled down sufficiently before carrying out any work on it. It takes at least 4 hours for the *sintering oven* to cool down from the maximum temperature to around room temperature.
RS-232 interface

The sintering oven has an RS-232 interface (A) on the rear, which is used to save log files on a computer.

Requirements

- RS-232 interface cable
- Computer with RS-232 connection option
- Software “uCon” (available under: http://www.umonfw.com/ucon/)
- Microsoft Excel licence

**Notice**

If the computer to be used has no RS-232 connection option, a USB adapter with installation CD can be ordered from the manufacturer.

In this case contact the Mihm-Vogt customer service.

1. Connect the sintering oven to the computer using the connecting cable.

2. Start the “uCon” software.
3. Set the configuration shown.

4. If the “Com Port” is not known, select a suitable one with “Portscan”.

5. Confirm your entry with “OK”.

6. Save your port configuration in the “File” menu and “Save As...”.
7. Configure the logging:
   ▶ Select the “Standard” option in the “Logging” menu.
   ✐ The configuration window is opened.

8. Set the checkmark as shown and give the TXT file a name.

9. Confirm with “OK”.

10. Start the sintering program at the sintering oven.
    ✐ The sent data is displayed.
    The target temperature appears in the left column, the actual temperature in the right column.
11. Click on the X button to write the data to the known TXT file (here Test1.txt).

12. The logging is terminated by clicking on the button.

13. Call up Microsoft Excel to create a graphic.

The Text Conversion Assistant opens.

15. Click on “Next” and make the following settings:

16. Set the checkmark at “Space”.

17. Click on the “Next” button.
18. Click on the “More...” button.

19. Permute point and comma for both settings and confirm with “OK”.

20. Click on the “Finish” button and “OK”.

---

For the RS-232 interface:

---
21. The data series are displayed.

![Diagram Assistant selecting a chart type](image)

22. Select the Diagram Assistant and choose a diagram type (e.g. line).
23. Click on “Next” three times and then “Finish”.

24. The finished diagram is displayed.
Care and maintenance

Clean the housing of the sintering oven every so often with a damp cloth.

**NOTICE**

**Damage to the heater!**

- Make sure the heating chamber does not become dirty. This could damage the heater.

**NOTICE**

**Use of colouring liquids affects the unit’s service life!**

During the sintering process, the use of colouring liquids can significantly shorten the service life of the heating elements.

**Service programs**

A cleaning cycle should be run periodically depending on how often the oven is used. This serves to remove contamination due to liquids and other impurities that become deposited in the insulation.

Depending on the frequency of use, a regeneration cycle should also be carried out, which is necessary for regeneration of the heating elements.

**Service programs can be selected on program slots 31-33.**

**Program slot**

- 31 Service A - Temperature control
- 32 Service C - Heating chamber cleaning
- 33 Service E - Heating element regeneration

---

1 Only in conjunction with test kit
# Faults and error messages

## Safety

### Danger

**Electricity!**
Risk of death from electric shock.
- Work on electrical systems may be performed by qualified electricians only.
- Before carrying out any installation, maintenance, cleaning or repair work, disconnect the power supply of the *sintering oven* and secure it against being switched back on.
- Do not touch live cables and components with wet hands.
- Observe the accident-prevention regulations when working with electric current.

### Warning

**Hot surfaces!**
Risk of serious burns to the limbs.
- Do not touch the housing or the oven door during operation.
- Ensure that the *sintering oven* has cooled down completely before carrying out maintenance, cleaning and repair work.
- Wear heat-resistant, thermally insulated safety gloves when it is necessary to carry out work on hot components.

### Notice

**Material damage due to incorrect repair of electric cables!**
This may cause malfunctions and make electric components defective.
- Do not repair defective cables or plugs.

Decommissioning

Decommissioning can be carried out for two reasons:

- For the purpose of reinstalling the unit at another location.
- For the purpose of final disposal.

If the *sintering oven* is to be reinstalled at another location, decommissioning must be well prepared. All components and fittings must be carefully removed, labelled and, if necessary, packaged for transport. This ensures that all parts can be identified correctly and refitted in the correct positions when reassembling the unit.

1. Switch the *sintering oven* off.
2. Disconnect the *sintering oven* from the voltage supply.
3. Remove all connections (e.g. PC interface cable, etc.) from the *sintering oven*.

Disposal

Safety

**WARNING**

Release of pollutants!
Pollutants can be inhaled when the insulating materials are handled.

- Wear personal protective equipment (respiratory protection) during disposal.

**WARNING**

Potential contamination of the environment and groundwater due to improper disposal!

- The regulations and guidelines of the legislature in the country of operation must be complied with when disposing of parts of the unit and operating materials.

Disposal

1. Sort the component parts of the *sintering oven* into recyclable materials, hazardous substances and operating materials.
2. Dispose of the component parts of the *sintering oven* or take them to be recycled.
