Greenstate Pre-Polishing System

JAY'S GS TOOL KIT

 **zubler**USA

Jay Emirzian owner of Galaxy Dental Lab in South Carolina, put together this kit of “Green State” zirconia rotary instruments to reduce or even eliminate stain and glaze cycles after sintering! When he introduced the kit to us, we realized (as Jay did) this kit possesses transformative potential! We decided to partner with Jay to offer these tools. A video presented by Jay teaches how he uses these tools and how you can get the most from them.

GS-A0

Carve primary and secondary anatomy into the occlusal table of posterior crowns. Extremely long life.

GS-C1

Take down the pins on crowns after being cut from the puck. Use with truing stone to flatten out contours. Extremely long life.

GS-C2

Contour the furcation's of posterior crowns. Similar to GS-C1 but smaller for tight spaces. Use with truing stone for sharp tip. Extremely long life.

GS-PP

Prepolish entire crown. Perfect for contouring the occlusal table and turn down of the marginal offset to a knife edge. Medium to long life.

GS-SF

Final polishing of green state zirconia. It gives a super-fine polish. Long life span.

GS-UF

Final Polishing (similar to the GS-SF) for ultra-fine polishing. Long life span.

GS-IP

Contour proximal areas of bridge connectors. Extremely long lasting. The life expectancy estimates are based on usage style, your results may differ.

GS-A0

GS-C1

GS-C2

GS-PP

GS-SF

GS-UF

GS-IP

Using these tools without viewing the video reduces your chances of success. As Jay says, “The devil is in the details”! In this short video he will teach you his techniques and how he utilizes these tools to get the best results.

You can find the video on Zubler USA's Website!
